The Pre-Ignition Catalytic Converter

The Pre-Ignition Catalytic Converter (PICC) could get your car up to five times the gas mileage! The name says it all. The Pre-Ignition Catalytic Converter is a catalytic converter that operates before the gasoline is introduced to the engine. The catalytic converter that is currently installed on your vehicle is located at the opening of your exhaust pipe. The purpose of the catalytic converter is to break down large gas molecules that were not burned by your engine, before they are exhausted into the environment. Your engine is not efficiently burning your gas and those precious gas molecules are not being used to power your engine, rather they are being burned up so that they won't be exhausted into the environment.

The PICC “cracks the gas” or breaks down the gas molecules into smaller ones before the gasoline is introduced into the engine, rather than afterwards. Our system uses a magnetic and electrical reaction to break down the molecules. This will enable all of the gas to be burned properly in the engine, thus fully utilizing the gas that is put into the engine, getting you up to five times the gas mileage, and not exhausting molecules of unused gas into the environment. So the gas that you pay for will no longer be wasted through the catalytic converter and the molecules will no longer be polluting the environment! It will now be as it always should have been – gas burned in the engine instead of a catalytic converter!

The PICC is not yet available for purchase. We are giving quotes for the PICC which does not typically void existing warranties. It may take a few months to get you a quote, but... it will be worth the wait!

The Hydro Assist Fuel Cell - Ready Now!

The Hydro Assist Fuel Cell (HAFC) may increase your current gas mileage by 50% - 100% and produce more engine power. The fuel cell system extracts a Hydrogen-Oxygen mixture from a distilled water reservoir. The HAFC adds extra hydrogen to the fuel mixture which burns easily and powerfully and enriches your fuel mixture, giving you added mileage and power. The oxygen increases the octane value of the fuel. Powerful magnets ionize the water and the gasoline in the gas tank to produce smaller molecules and separate their compounds into simple elements so that they burn more efficiently. The conditioner “cracks” and vaporizes the fuel which burns more of the gas molecules, getting you better gas mileage and extending the life of your engine. The balance of Hydrogen and Oxygen with the vaporization and ionization, produces significant increase in gas mileage, cleaner engine conditions, more horsepower, better performance, and dramatically decreases exhaust pollution!

The HAFC system is compatible with any conventional motor vehicle. The installation is simple and takes only a few hours for a mechanic to install. We believe in our product’s abilities so much that we are offering a **14 day money back guarantee**. You will have fourteen days after having the system tuned by a certified tuner to experience the amazing increase in your gas mileage, and power and performance in your engine. If, after having a certified tuner optimize your system, you do not experience at least a 50% increase in fuel economy, simply return the system for a complete refund (refund does not include shipping and any costs you paid for installation).

**Start putting your gas savings
to better use today!**

Estimated Savings

Travel per year	15,000 km	9,320 miles
Fuel Economy	10L per 100km	23 mpg
Cost of Gas	\$0.95 per litre	\$3.59 per gallon
Estimated yearly cost	\$1,470	\$1,454
50% fuel economy increase	\$735.00	\$727.00

This is only a sample - results will vary. Your vehicle may have different fuel economy, you may travel more or less per year, and gas prices will vary. The more you travel and the higher the gas price is, the more you will save.

Upgrade Offer

In order to purchase the currently available Hydro Assist Fuel Cell (HAFC), you will need to request a free, no-obligation quote for the Pre-Ignition Catalytic Converter (PICC). You can do this on-line at <http://www.preignitioncc.com/savenow> . If you do not have access to the internet, please call us and we will send you a paper request form.

If you decide to purchase the PICC when it becomes available, 100% of the cost of the HAFC system will be applied to the cost of the PICC. Our customers will never be without a fuel saving system! We are offering the HAFC now to give you some fuel economy while you are waiting for the big deal (PICC).
